Grading Scale

Every diamond is unique, with its own series of internal and external characteristics. The skilled grader takes into consideration the size, nature, location, relief and number of these characteristics to assign each stone its proper grade.

FL	IF	VVS1	VVS2	VS1	VS2	SI1	SI2	SI3	P1/I1	P2/I2	P3/I3
Flawless	Internally Flawless	Very, Very Slight Inclusions		Very Slight Inclusions		Slight Inclusions			Pique / Inclusions		

The Flawless Grade (FL) is used to describe diamonds in which a skilled observer, under favourable lighting conditions, cannot see any inclusions or surface blemishes, after thorough examination with a binocular microscope at ten power magnification or with a 10x corrected loupe. Small extra facets on the pavilion near the girdle, not visible when viewed from above, are permitted as are small naturals when they are confined to the girdle and do not flatten the girdle outline. Internal graining is permitted provided it does not draw any colour or texture and is not observable through the crown.

The Internally Flawless Grade (IF) Describes diamonds which have no internal characteristics observable, but which have minor surface blemishes that do not penetrate the stone

The Very, Very Slight Inclusions Grade (VVS1 & VVS2) are used to describe diamonds which have very, very small inclusions and difficult for a skilled observer to see.

The Very Slight Inclusions Grade (VS1 & VS2) are used to describe stones with very small inclusions

The Slight Inclusions Grade (SI1, SI2 & SI3) are used to describe stones with small inclusions which are usually obvious when viewed under normal conditions.

The Pique / Included Grade (P1/I1, P2/I2 & P3/I3) are used to describe stones with medium or large inclusions which are usually obvious to a skilled observer, with the unaided eye, under favourable lighting conditions

Colour Grading Scale
